

# Advanced Solution Packages

Wi-Tronix provides unprecedented visibility to your rail network using the most advanced IoT platform designed specifically for the rail industry.

We have technologies to enable improvements in safety, efficiency, and reliability for multiple areas of your operations.

The Advanced Solution Packages are the connected-solution options added to the foundational BasicPlus Solution Package for your fleet. Advanced Solution Packages leverage Edge and Cloud solutions to provide additional functions in specific areas like fuel management, event recorder and video, big data, operations and safety. These Advanced Solution Packages are individually available to help solve specific needs within your operation. You choose the solutions to fit your needs and your operations.

**We offer many Advanced Solution Packages for complete control of your data.**

## Why Wi-Tronix?

### Our Solutions Have Transformed the Industry...Again.

Wi-Tronix integrates data from all available sources on your rail vehicles on an unprecedented scale for rail companies.

Wi-Tronix uses state-of-the-art technologies, including video and data analytics, artificial intelligence and more. We also provide a single solution for your entire fleet using comprehensive, complete solutions for real-time visibility of your rail network that save time and money.

Questions? Contact your sales representative or reach us at [sales@wi-tronix.com](mailto:sales@wi-tronix.com) for detailed discussions on how Wi-Tronix Advanced Solutions Packages can help your operation.

# Advanced Solution Packages

The Wi-Tronix Advanced Solution Packages provide specific value and benefits to your operation.

All packages leverage the Wi-Tronix IoT Platforms, the functions of the BasicPlus Package, as well as the Wi-Tronix web portal to bring additional value and insight into your rail operations.

## IoT for Rail Packages

With real-time data, B2B big data collector, satellite connectivity, Wi-Router, and extended data retention for unprecedented visibility on your rail network.

## Safety, Risk Management & Compliance Solution Packages

Monitor crew performance and adherence to operating rules with visual intelligence for signal compliance and mobile phone detection.

## Event Recorder & Video Packages

Our Violet crash-worthy connected event recorder with extended video retention and third party camera support ensures secure, comprehensive data that is always available from the cloud. Our standard package includes forward and in-cab cameras with others as options.

## Mechanical Maintenance Support Solution Packages

Optimize maintenance and know the status of every rail asset in your fleet with the ability to monitor the distributed braking car, oil analysis, elite monitoring and Wi-Nostix predictive analytics.

## Energy Management Solution Packages

Reduce your operating costs with fuel and multi-fuel sensor monitoring, as well as automatic engine stop/start (AESS) and auxiliary power unit (APU) monitoring.

## Transportation Operations Support Solution Packages

In-cab audio speakers and train data fusion provide network performance solutions that enhance safety and maximize productivity.

Individual packages can be selected to add functionality and value.
