# WI-TRONIX

Connected Crashworthy Data Package

The Connected Crashworthy Data Package enables the Violet Edge to be your IEEE1482-Compliant Event Recorder.

As a Connected Solution, data is continuously synced to the Cloud, eliminating the need for someone to physically connect to the Event Recorder on the vehicle.

Your data is secure and available from anywhere at any time via the Cloud.

The Wi-Tronix web-based viewer eliminates the need for proprietary playback software.

Power Hold Up

The last few seconds of data after an impact are often the most valuable for incident investigation.

The Wi-Tronix Power Hold Up feature ensures the Violet Edge continues to function while Event Recorder data is sent to the Cloud, multiple seconds after power loss.

Value Added Services

Wi-Tronix now provides the next level of support for operations through:

- Incident and litigation support
- 24/7/365 U.S.-based technical support
- Secure legal hold of your cloud-based data

Why the Violet Edge Event Recorder?

Easy to Use – Saves Time and Money

Remote Information Access

Easy-to-use, secure web-based portal or B2B connection – no separate software needed

Integrated Data

Simplify and accelerate investigations with the integration of vehicle data, GPS, and other data

Data Normalization

A continuous, normalized, and synchronized dataset that is always available in real time

Safe and Secure Data

Security

Data is retained in a SOC 2 Type 2 compliant infrastructure with selectable user access levels, and secure online sharing within your operations or with third parties

Integrity

Certified Crash Hardened Memory Module and Power Hold Up feature eliminates worry of losing data in an incident or during power loss

Preservation

One-click access to two years of the continuous history of second-by-second ER and connected system data

Chain Of Custody

Assurance that the Legal Department can prove the integrity of the ER and video data from a remote locomotive download to in-court viewing

Continuous Monitoring

Second-by-second monitoring of FRA data ensures data is always recorded properly
