

Locomotive Video, Voice Recorder (LVVR) Solution

Our managed solution provides easy and secure remote access to onboard video and voice recording.

Maximize safety, minimize operation constraints and the cost of regulation compliance with automated data management in a SOC 2 Type 2 compliant environment.

Remove unnecessary complexity of the LVVR requirement that impedes current safety best practices around threat detection and train handling events. Wi-Tronix maintains those established best practices through its privacy and security controls that exist today. This allows you to focus on additional capabilities that advance your safety culture through digital insights. Simply, our solution grows with you like no other solution can today. We help you identify new safety threats overtime and solve those through innovation of new detection alerting.

A Single, Integrated System

We pull from multiple onboard data sources, and bring it into one simple, actionable view - driving quicker, more precise outcomes. Wi-Tronix Edge and Cloud solutions combine to provide a complete view of your operation including comprehensive replay and review of events for safety, risk analysis, and operational support. Safeguard your employees, assets, customer goods, neighboring communities, and the environment at all times.

Our single platform helps you decrease operating costs and enables railways to meet LVVR and FAST Act regulations.

Simplify Safety, Monitoring, Maintenance and Data Security

Making Compliance Easy

Random automated downloads, and threat/trend detection to find critical or undesired events. Unique web-based player, Violet View™, with video, voice, signal data displays, and a timeline map, eliminates the need for maintaining 3rd party proprietary software. Minimize operational constraints with alerts for in-cab camera obstruction and cross border support.

Reducing Maintenance Cost

High system availability through automated remote health monitoring, over-the-air software updates, and configuration management.

Security and Integrity

Secure communications management prevents unauthorized access and individual user activity reports help assure employee privacy.

Data Management

Easily access and retain the mandatory six years of video, voice, event recorder and connected system data with disaster recovery capability.
