

# Violet Vision

## A CCTV solution to protect your assets and data

When an incident occurs, how does your transit system respond? Having to return the vehicle to the maintenance facility or send maintenance staff in order to retrieve sensitive files results in lost valuable time.

With the Wi-Tronix Closed-Circuit TV (CCTV) solution, know what happened, where it happened, and send enhanced video information to the appropriate authorities before arriving on scene.

### Key features

- Take advantage of the advanced web-based back office. No more on-site downloads onboard the vehicle. No more management of physical files.
- Find any specific event in a flash thanks to thumbnail imagery indexing, ideal for incident analysis.
- Experience cost reductions, operational efficiency, and overall safety improvements thanks to on-demand, high-resolution videos that your team can access from anywhere at any time.
- The Virtual Reality (VR) viewing capabilities allow for any authorized user to get a live look in through the 360° cameras, as if the viewer is truly in the vehicle with the passengers.
- Data and video are now synchronized – and includes location, station, route, door, and other system information – allowing users to either get a live or historic view on your transit system.
- Clear and concise online sharing capabilities allow for an easy flow of information to local authorities when necessary.
- Secure activity logs ensure a comprehensive Chain of Custody; know that only authorized individuals have handled delicate files.
